Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. This is a Non-Final Office Action from the examiner in charge of this application in response to applicant's amendment dated 7/17/2008.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 11-16, 18, 20-24 are rejected under 35 U.S.C. 102(b) as being anticipated by USP 4,732,430 to Byrns.

Byrns discloses a drawer comprising all the elements recited in the above listed claims including, such as shown in Figs 2 -3, & 5, a drawer body including a bottom wall 50 and a peripheral wall structure 52 extending upwardly from the bottom wall 50, the bottom wall and the peripheral wall structure defining a drawer space, the peripheral wall 52 having first and second end portions; first and second mounting structures on the respective end portions of the peripheral wall structure, each mounting structure including a base portion projecting forwardly from the peripheral wall structure and an attachment portion 60 projecting from the base portion, the respective attachment portions 60 projecting laterally inwardly from the respective base portion toward the drawer space; and a front panel 12 including an elongated panel wall having a front surface and a rear surface, a projection on the panel wall having a base portion extending rearwardly from the rear surface of the panel wall and an attachment portion

36 integral with the base portion and extending therefrom substantially parallel to the rear surface of the panel wall for cooperation with the rear surface of the panel wall to define an open-ended channel therebetween that extends the entire length of the panel wall, the attachment portions of the mounting structures being laterally slidably receivable in the channel of the front panel 12 for mounting the front panel 12 on the drawer body in a mounted condition extending across a front end of the drawer body. In regard to the method claims, since Byrns discloses all the structural limitations recited therein, it is inherent that one skill in the art can perform the method steps recited therein, thus meets the claimed limitations.

Response to Arguments

4. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
